

Differential Manometer Modification

Allowing Direct User Readout

and-or Automated Data Acquisition

Craig E. Nelson - Consultant Engineer

The goal for this work was to find circuit entry points on an existing instrument that would allow direct user readout and-or automated data acquisition.

This requirement sounds simple, but due to a lack of a schematic diagram and the existence of buried circuit board traces, it wasn't. Never-the-less, I was able to get the job done ...
